Space, Return or Tab commits the buffered word. At 32 cells, a word boundary is forced.

Other commands or changing mode, layer or settings discards the buffer. Conventional keys also clear it.

Modifiers are one-shot. Home / End send host keys. Settings requires the editor feature.

For literal abbreviations, select ordinary 8-dot before typing. Custom overrides can replace these bindings.

Capitals add the bottom-left dot. Standalone wordsigns expand; capitals stay literal.

Press the dark dots of each cell together; enter cells in order. Pale dots show unused positions.

Comma, hash and semicolon stay literal. Unassigned patterns output nothing.

Letters are shown only where cells represent alphabet letters. A miniature cell in the letters column preserves a non-letter component.

Braille cells are visual references, not embossed tactile braille. Fold along the guides; front cover is the outside right panel.
